EDUCATION

2022 – 2026

Istanbul Health and Technology University

B.Sc. in Software Engineering

GPA: 3.28

LANGUAGES

English: B1 – B2

SKILLS

Programming & AI:

Python for data analysis, machine learning, computer vision (OpenCV, YOLOv8), natural language processing (SentenceTransformers, GPT API), and backend development (Flask, FastAPI).

Machine Learning Frameworks:

TensorFlow, Keras, PyTorch, and Scikit-learn.

Data Analytics:

Data cleaning, feature engineering, statistical modeling, and data visualization using NumPy, Pandas, Matplotlib, and Seaborn.

Databases:

SQLite, MySQL, and MongoDB.

Frontend Development:

React, JavaScript (ES6+), HTML5, and CSS3.

Version Control & DevOps:

Git, GitHub, and Docker.

ABOUT ME

I am a passionate Software Engineering student with a strong interest in software development, artificial intelligence, and web technologies. I have developed projects in Python, machine learning, computer vision, and web application development. I am a team-oriented, solution-focused, and eager-to-learn individual. My goal is to use technology to create human-centered solutions and to become a contributing engineer in the ever-evolving world of software.

PROJECTS

Rat Pose Estimation – YOLOv8

I developed a pose estimation model to detect keypoints of rats using the YOLOv8 architecture on datasets labeled with CVAT. The model is suitable for behavioral analysis in laboratory environments and achieved a 98.3% mAP50 performance.

AI-Powered Educational Assistant

I developed a chatbot capable of generating teacher-assisted, context-aware responses using ChromaDB, OpenAI GPT, and SentenceTransformers. Through keyword matching, vector-based search, and a GPT-supported decision mechanism, the system produced 100% context-aware responses.

Football Player Classification

I developed an image classification model based on LBPH (Local Binary Patterns Histograms) to recognize individuals from football player photographs. The model was built using OpenCV and Scikit-learn and achieved high accuracy on test data.

Kaggle Data Analysis Projects

I gained hands-on experience in data cleaning, feature engineering, model comparison (Random Forest, MLP, SVM), and performance metric analysis using various datasets on the Kaggle platform. I actively participated in model optimization, error analysis, and data visualization processes.
